

SURESAVE[®]

OPTIX

CHEMICAL DILUTION

SureSave[®] Optix

SureSave[®] Optix provides the professional cleaning, healthcare and food service industries with a flawless chemical dilution system. Customers and suppliers endeavour to discover alternative dilution systems which provide the benefits of formulation technology combined with patented packaging to secure and control the use of chemicals.

SureSave[®] Optix overcomes these difficulties, performing to expectation.

Chemical Dilution

SureSave[®] Optix provides an accurate and easy to use automated chemical dispensing system, ensuring the required cleaning solutions are ideal for the task in hand.

With the patented Aperture irremovable cap and unrivalled simplicity, SureSave[®] Optix secures and controls the use of chemicals, preventing misuse, pilferage, contamination and waste - a necessity for customers in any industry.

SureSave[®] Optix European Standard (EN) certified concentrate formulations provide a safe solution for the use with spray cleaning, bucket cleaning and scrubber driers.

Chemical Dispensing

Modern and functional, the SureSave® Optix design enhances simplicity and ease of use, providing control and accurate chemical dispensing.

The colour-coded system clearly links the equipment, chemical concentrates, dilutions and specification documentation installed.

Optix Technology

The plumbed dispensing technology and simple push and fill mechanism of SureSave® Optix system simultaneously blends the chemical concentrate and water, delivering an instant and accurate dilution.

Integration

The patent pending housing establishes a connection between it's container and dispensing device, creating secure integration and setting a benchmark for simplicity, control and safety.

Chemical Concentrates

SureSave® Optix EN certified sanitisers and disinfectants are specially formulated for food preparation and healthcare applications.

Colour coded user tutorial documentation with bespoke wall charts are provided with every dilution system installed.

Additional concentrates are formulated for the cleaning of glass, metals, floors, washrooms and general degreasing.

Pack Size: 4 x 2L

SureSave® Optix Irremovable Cap

Once fastened to a container, the SureSave® Optix Irremovable Cap cannot be re-opened, detached or removed.

The irremovable innovation provides a simple and secure solution to the dispensing of liquids that need to be extracted from containers in controlled quantities. This prevents misuse, pilferage, contamination and waste, therefore reducing cost.

Unique One-Way Valve

The unique one-way valve and pre-use seal safeguards the chemical contents within the container. This prevents many conventional waste problems, ensuring safety in transportation and storage.

Irremovable Design

The irremovable dispensing container cap provides the consumer with the confidence that the chemicals purchased are being utilised in the correct and controlled way.

Being able to unscrew or remove a cap closure from a container would not provide for this.

Lockable Design

If extra security is required, a keyed barrel lock can be fitted to the unit. Otherwise, a simple blanking moulding is inserted to cover the resultant hole.

Non-Plumbed Option

A secure integrated system for SureSave® Optix may also be provided for customers without the need of a plumbed water supply.

Spray Solutions

Colour coded and numbered labelling ensures a simplified cleaning system, which overcomes language barriers. This avoids any misunderstanding on the proper use of the chemicals, making them suitable for anyone to use.
